

## DSL Software Solutions Offered

DIAGSOL does not create its own fully functional PdM / Reliability solutions; we do, however, partner with system and solution providers to offer world-class solutions, and we have a number of codeshare relationships with companies such as Signalogic (UK).

# Vibra Gateway

Embedded | Inside Firewall | Automation Solution

This Linux-based App/ Image allows data collection from **Bluetooth**<sup>®</sup> wireless technology uBlocks and Laird BT610 Automation elements within an enterprise Firewall (LAN).

Data are all stored locally and can be exported to the plant Automation system via OPC; Status and Action Tables available for plant HMIs.

Your DIAGSOL remote analyst can VPN into the analysis suite to advise you on any critical issues

# Vibra Mobile

Vibration  
Monitoring  
Lite  
Solution

Runs on Android to allow the route/ and off-tour walk-up collection of data from uBlock devices.

Data are passed up to the Vibra Cloud Database via 4G or Wi-Fi, and data are analysed within the Vibra Desktop Application.

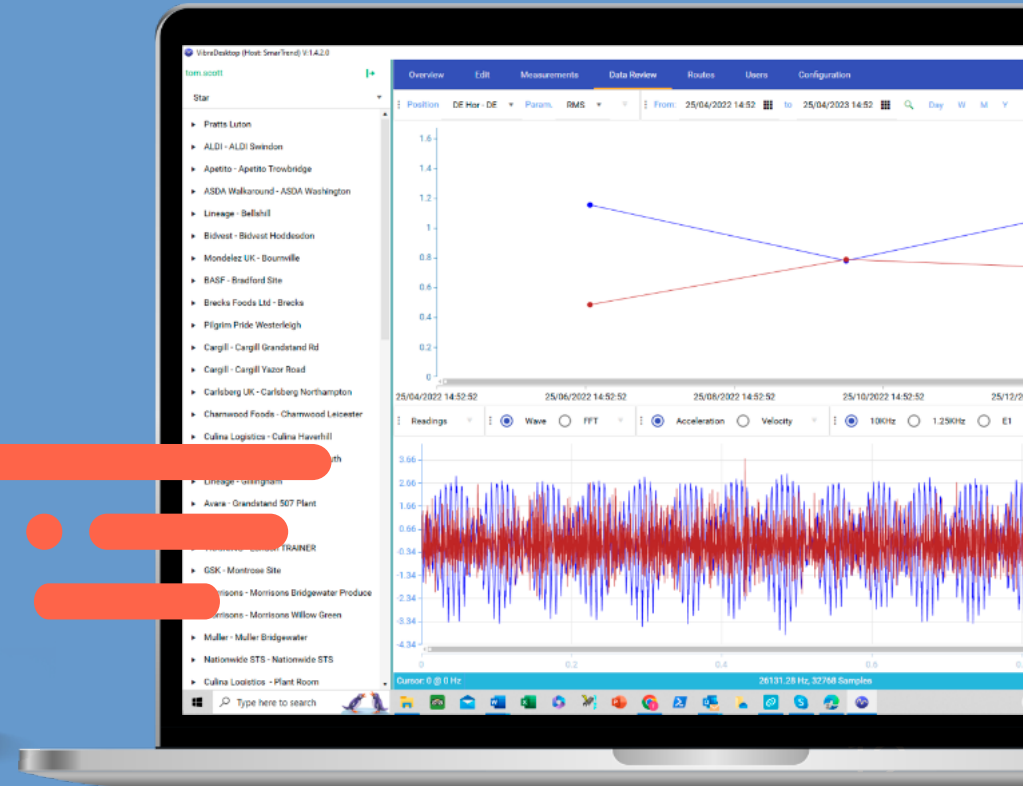

# Vibra Desktop

The application supports a number of functions; please note this application can also be run on the Vibra Gateway (see below).

Database Build/ Alarms  
Analysis of Data

Creation of Routes  
Alarm Review
